

KEY FEATURES AND BENEFITS

- Simple - CC Connector is easy to install with CC access already preconfigured. Simple Start/Stop Button lets you switch on and off the service.
- Flexible - CC Connector has extensive customisation options to fit your business schedule and file movement requirements.
- Secure - Files transferred to and from the mailbox are protected using secure FTP over SSL, SSH, and HTTP/s transfer protocols.
- Reliable - CC Connector leaves a very small footprint on the system. The program runs as a service and therefore does not require any user interaction.
- Supervision - with extensive built in logging and debugging facilities it is easy to analyse communication sessions and involve CC support if a communication session fails.
- Future proof - CC service updates and new functionality will be automatically incorporated in the CC Connector.

CC Connector

CC Connector is an easy-to-use yet powerful secure FTP/s client for managing the data flows between the CVAN/CC mailbox and the client's computer system.

In comparison to most standard windows FTP clients which are user driven for manual up-/download the CC Connector was specifically designed and implemented as a service to support unattended operation without any user interaction.

This proves as a major advantage over general purpose-built FTP clients who may wait for a user input during a session even when script driven. A simple stop/start button lets the user start the configured schedules and no further interaction is required.

Support for Salesforce Marketing Cloud connections now available. Integrate with Salesforce to better connect your business operations. Please contact us for further information.

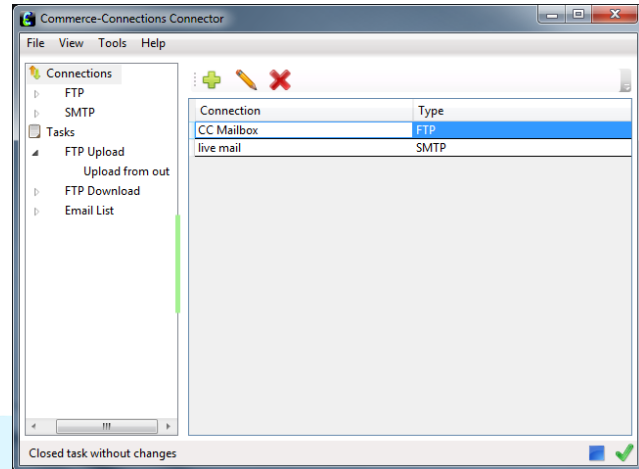

A simple and task-oriented User interface lets user choose between:

- Configuration - the CC Network definition, security protocol and login settings.
- Scheduling - the schedules for up- / download of files and file related settings.
- Activity Log - supervise, track and trace of transactions history.

SOLUTION DETAILS

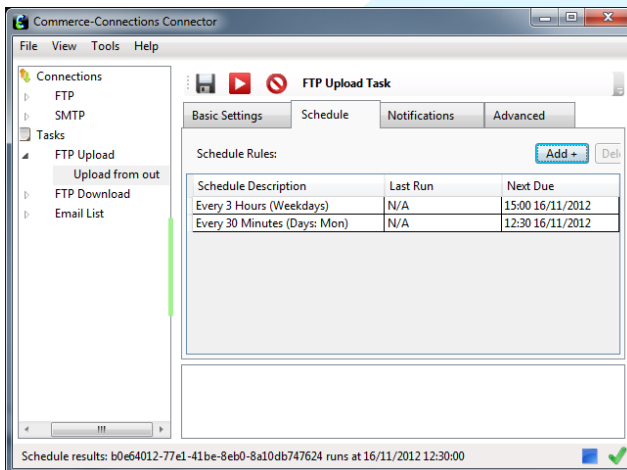

Configuration

A simple configuration window with predefined CC connectivity parameters allows even novice users to setup CC Connector

Schedule

The scheduling panel allows users to schedule recurring up or download tasks using any date and time combination available. Extensive file mask options enable file pick up and naming to suite a typical production environment.

Activity Log

All CC Connector activities are recorded in the activity log which is searchable and can be exported for archive or analysis purposes.
